

Dear SuperMAG Friend

Latest news from the SuperMAG service:

- 1) Data holdings vastly expanded.
- 2) Auroral electrojet indices.
- 3) Changes in the SuperMAG organization.

As always we are open to any feedback.

Best wishes,
Jesper

1) Data holdings expanded.

With the generous help of the SuperMAG collaborators we have expanded the data holdings. This expansion is very comprehensive and includes data from 1980-2010.

2) Auroral electrojet indices.

SuperMAG now derives auroral electrojet magnetic indices. These indices are not official indices and are not authorized by IAGA. The official indices can be found at World Data Center for Geomagnetism, Kyoto.

3) Changes in the SuperMAG organization.

The SuperMAG PI, Jesper W Gjerloev, have accepted a professorship at University of Bergen, Norway. His contact information can be found below. This will have no impact on the SuperMAG initiative as Jesper continues as the SuperMAG PI. Dr. Shin Ohtani is now the APL based PI.

Jesper W Gjerloev
Professor, Dept. of Physics and Technology, Room 446
